TowneBank Rapidly Scales User Access Reviews 4X with SecurEnds

CHALLENGE

Manual application reviews were far too time-consuming, especially in light of new regulations and audit requirements. TowneBank wanted to scale and automate its access certifications in order to eliminate human error, reduce vulnerabilities, and stay compliant at all times. Automation would also provide the opportunity to free up employee resources by conducting thorough auditing at a faster rate.

SOLUTION

SecurEnds provided TowneBank's internal audit team with a dependable and scalable solution for conducting access reviews efficiently. Their team now has centralized visibility into access data, giving them greater confidence in data quality and reporting in the face of constantly changing regulations.

Enabling TowneBank to automate access certifications has reduced audit and labor hours associated with user access reviews. **SecurEnds User Reporting enabled the bank to easily de-provision users as well as more effectively administer license management.**

ABOUT CLIENT

A fast-growing regional bank serving multiple areas of North America, TowneBank's rapid expansion led to a sharp increase in applications used by their staff (300%), which quickly made manual identity and access management processes impossible.

SECUR·ENDS

TOWNE BANK

"The investment in scalability goes a long way to improve efficiency."

Jonathan Hitch
VP Information Risk, **TowneBank**

AUTOMATED VS. MANUAL

SECURENDS BENEFITS

4X
Scalability of user access reviews and identity management

Stay compliant and reduce risk of data breaches by eliminating vulnerabilities

Save hundreds of hours by automating tedious manual identity control methods

ABOUT SECURENDS

SecurEnds' holistic governance platform enables organizations like yours to gain security and compliance visibility with a single unified view across all applications and platforms – both in the cloud and on premises – to fortify security posture, easily provide proof of compliance, and ultimately reduce audit fatigue. As critical data crosses organizational boundaries, SecurEnds gives you answers to "Who has access to what?" and "What are our security risks?"
